Did You Know?

The adult human gut contains over 100 trillion bacteria. In a healthy gut, only a small percentage of the bacteria present are harmful. The 'good', or probiotic, bacteria help maintain intestinal wellness by promoting digestive function and nutrient absorption, as well as regular bowel function and health. They are also a key component of the body's immune defense system. Diet, lifestyle, antibiotics, stress and other factors can offset this balance and lead to digestive and health issues.

Tahukah Anda?

Usus orang dewasa mengandungi lebih daripada 100 trilion bakteria. Dalam usus yang sihat, hanya peratusan kecil bakteria adalah berbahaya. Ia juga adalah komponen penting dalam sistem pertahanan imun badan. Diet, gaya hidup, antibiotik, tekanan dan faktor-faktor lain boleh mengganggu keseimbangan ini dan mengakibatkan masalah pencernaan dan kesihatan.

The colon (also known as the large intestine) is the last stop in our foods' journey through the digestive tract. Its main function is to absorb fluid from indigestible food residue and produce solid waste for elimination. But a healthy colon is also important for overall good health. The colon is important for fluid, electrolytes and fatty-acid absorption, and is also home to a large number of commensal bacteria ['good bacteria'], which may hold many benefits for the body. Regular bowel movements without pain, bloating, diarrhoea or bleeding are likely signs of a healthy colon.

Tahukah Anda?

Kolon yang sihat juga penting untuk kesihatan keseluruhan yang baik. Kolon adalah penting untuk penyerapan cecair, elektrolit dan asid lemak. Ia juga rumah kepada sebilangan besar bakteria komensal ['bakteria baik'], yang memberi banyak manfaat kepada tubuh badan. Pembuangan sisa usus tanpa rasa sakit, kembung, cirit-birit atau pendarahan merupakan tanda-tanda kolon yang sihat.
