The adult human gut contains over 100 trillion bacteria. In a healthy gut, only a small percentage of the bacteria present are harmful. The 'good', or probiotic, bacteria help maintain intestinal wellness by promoting digestive function and nutrient absorption, as well as regular bowel function and health. They are also a key component of the body's immune defense system. Diet, lifestyle, antibiotics, stress and other factors can offset this balance and lead to digestive and health issues.

Ia juga adalah komponen penting dalam sistem pertahanan imun badan.
