

4Life Transfer Factor AgePro

REPROGRAM THE WAY YOU AGE

Formulated to improve vitality and immune rejuvenation, 4Life Transfer Factor AgePro includes some of the most cutting-edge ingredients in healthy aging research.

Alpha-ketoglutarate (AKG)

AKG has been shown to be a potent regulator of lifespan and healthspan.

β -Nicotinamide Mononucleotide (NMN)

Clinically shown to improve performance and support healthy aging, NMN is converted into NAD⁺ metabolites and supports cellular power. According to the studies, NMN starts to impact indicators of NAD⁺ within just one hour!

White Button Mushroom Extract

White button mushroom extract contains spermidine, which supports cellular autophagy. Autophagy helps the body break down and reuse old cell parts, helping them function better.

Quercetin

Research shows that quercetin is a senolytic that helps remove malfunctioning cells, commonly referred to as “zombie cells.” Quercetin also reduces harmful free radicals that can cause oxidative stress.

Apigenin

Apigenin is a natural bioactive compound and another powerful antioxidant and potential senolytic that may help clear out old, harmful cells.

4Life Transfer Factor® bolsters Natural Killer (NK) cells in the presence of a health threat. In independent laboratory studies, 4Life Transfer Factor rejuvenated immune cells in older individuals so their immune response was equal to that of younger individuals. When a robust immune system is combined with 4Life Transfer Factor, there is greater potential for healthy aging and vitality.
