THE IMMUNE SUPPORT *Company*[®]

BREATHE EASY

This month, we're focusing on one of your most vital organs: your lungs. The American Lung Association states that up to 60% of Americans live in areas where the air quality can be dangerous to one's health.¹

Enter 4Life Transfer Factor® Lung! This product is packed with powerful ingredients to support your lung health and lung tissue. Let's dive deeper into this powerful product.*

Broccoli seed extract: Broccoli contains a powerful antioxidant called sulforaphane that helps your body detox, so it supports your lungs' natural detoxification process.*

Vitamins C and E: Vitamins C and E have been shown to support breathing function and reduce oxidative stress stemming from challenges like air pollution. Plus, vitamin C specifically supports healthy lung tissue.*

Thyme: Thyme is full of vitamins and minerals, including vitamin C, potassium, and manganese. Thyme helps your lungs remove air pollutants and foreign particles. Your lungs encounter a lot during the day, so give them some cleanup support.*

Ginseng: Ginseng boosts antioxidant function in smokers and nonsmokers, which means extra support for your lungs. Antioxidants help fight against oxidative stress, which can come from pollutants in the air you breathe.*

4Life Transfer Factor® Tri-Factor® Formula: This is one of our favorite ingredients to Raise Your Immune I.Q.®! We are The Immune Support Company®, but that's not the only reason we have immune support in this product. Your lungs actually have immune support cells called macrophages that help keep your lungs clean and functioning the way they should. Your immune support is hard at work in many areas of your body, including your lungs.*
