

4Life® Transfer Factor

Plus®

Tri-Factor® Formula

We all want to feel
our *best*— for ourselves,
for our families, for life!

Every day brings new opportunities, but it also
brings health threats. At work, at school, at home . . .
harmful invaders are constantly trying to break
down our natural defenses and wreak havoc on
our immune systems.

4Life® Transfer Factor Plus® Tri-Factor® Formula

4Life Transfer Factor Plus Tri-factor Formula was created to help support your immune system with patented and researched ingredients shown to boost, balance, and educate the immune system for a better, more fulfilling life!

Unlike common supplements you find in every health food store, transfer factors aren't vitamins, minerals, or herbs; rather, they're molecules that transfer immune memory and knowledge from one entity to another and are part of a ground-breaking approach to immune system support.

Your *Immune* System

There are two main parts to your immune system.

You're born with your **innate immune system**. It is like your standing army. These cells are always on alert, ready to attack anything out of the ordinary.

You develop your **adaptive immune system** as your body encounters foreign invaders. Think of innate cells as your initial responders and adaptive cells as your later responders. Transfer Factor supports both cell types—innate and adaptive.

Immune Cell Types

Your immune system has many different specialized cells. Each one has a different job, and it's important that they all stay healthy and efficient so your immune system can function properly.

Innate cells

- **Natural Killer (NK)** cells detect and destroy harmful invaders. They're like the special forces of your immune system.
- **Macrophages** are like the cleanup crews. They locate and eliminate dead cells, cell debris, and microbes.

Immune Cell Types

4Life Transfer Factor communicates vital immune system information that supports all functions of your immune system, including these immune system cell types.*

Adaptive cells

- **T cells** help your body distinguish between friend and foe and work with NK cells to attack harmful invaders.
- **B cells** assist in antibody production and immune system memory.

The *History* of Transfer Factors

In 1949, Dr. H. Sherwood Lawrence was studying the immune system when he found a small compound within white blood (immune) cells capable of transferring immune knowledge between people. He called them “transfer factors.”

David *Lisonbee* and Transfer Factors

In 1998, David Lisonbee was looking for a way to support his immune system.

- He found a patent at the U.S. Patent Office for extracting transfer factors from cow colostrum.
- He contacted the patent owners and entered into a license agreement with them. He used transfer factors from cow colostrum in his very first immune system support product.*
- Many other products, discoveries, and patents followed, but transfer factors from cow colostrum started 4Life on its journey to becoming The Immune System Company.

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

4Life's top-selling immune system support product!*

4Life Transfer Factor Plus offers comprehensive immune support from cow colostrum, chicken egg yolks, a super-mushroom blend, zinc, and more, all of which work together to boost, balance, and educate your immune system!*

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

The *Star* of Our Core Product Line

4Life Transfer Factor Plus offers our highest coverage of immune cell support.

Recent independent laboratory studies show that 4Life Transfer Factor bolsters Natural Killer (NK) cell activity in the presence of a health threat, while activating a variety of other immune system cells, such as: B cells, T cells, and macrophages.^{1*}

¹P. Vieira-Brock, A. Anderson, B. Vaughan, and D. Vollmer. 2019. Method development for the analysis of PBMC-mediated killing of K562 cells by bovine colostrum and various fractions. Immunology 2019.

Key Benefits

- Clinically proven to activate the immune system within 2 hours¹
- Contains zinc to support the production and function of all immune system cells, especially T cells*
- Contains a super-mushroom blend to support a variety of immune cells
- Supports immune system function, which, in turn, promotes healthy energy levels, overall wellness, and more*

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

Key Ingredients

Transfer Factor and Nature's First Food

Nature's first defense against health threats is colostrum—a nutrient-rich superfood that contains immune system education information to bolster and boost immune defenses.*

Transfer factors from cow colostrum undergo patented filtration processes to produce Ultrafactor® and Nanofactor®, which in turn allow for trillions of transfer factors to be present in each capsule.

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

Transfer Factor from Other Sources

Ovofactor is a patented concentrate of 4Life Transfer Factor proteins and other peptides from chicken egg yolk.

These unique molecules are shown to aid immune system function in a unique way that complements the education provided by transfer factors from colostrum.*

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

Think *Zinc*

Zinc is a trace element that helps support the production and function of key immune system cells.*

4Life Transfer Factor Plus Tri-Factor Formula provides 90% of your daily recommended amount of zinc per serving!*

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

Super *Mushrooms* to the Rescue!

Our super-mushroom blend packs a punch,
with four separate varieties of mushrooms
shown to improve immune system function.*

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

Agaricus blazei

Agaricus blazei is rich in polysaccharides, which are potent stimulators of the innate and adaptive immune system and activate macrophages, neutrophils, and lymphocytes.*¹

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

¹Zheng M, Ta, A. Yamamoto 1 2005 in vitro augmentation of natural killer activity and interferon-gamma production in murine spleen cells with *Agaricus blazei* fruiting body fractions. Biosci Biotechnol Biochem 60 2466-2460

Cordyceps sinensis

Cordyceps sinensis increases the number of T cells in the blood and spleen, influences immune system cell functions like cytokine production and proliferation, and regulates immune system cell function.*²

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

Maitake

Evidence suggests that maitake mushrooms have immunomodulatory effects. In one study, maitake was shown to stimulate both the cellular and humoral branches of immune system defense reactions.*³

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

³Immune-enhancing effects of Maitake (Grifola frondosa) and Shitake (Lennula edades) extracts.
Ann Trand Med 2.14

Shiitake

Shiitake mushrooms are one of the most studied mushrooms when it comes to immune health, and have been shown to stimulate the immune system, increase NK cell activity and the number of B cells, and stimulate the immune system defense reaction.*³

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

³Immune-enhancing effects of Maitake (*Grifola frondosa*) and Shiitake (*Lennula edades*) extracts.
Ann Trad Med 2.14

Oats

Oats contain polysaccharides that provide immunomodulatory effects in the body.*

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

Inositol Hexaphosphate

Aids in immune cell communication and supports the development of normal, healthy cells.*

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

The Supplement Physicians *Trust*

For nearly 20 years, 4Life Transfer Factor Plus Tri-factor formula has appeared in the Physicians' Desk Reference (PDR).

The PDR is a reference tool for healthcare professionals and includes in-depth product information about the 4Life Transfer Factor Tri-Factor Formula product line.
